PROCEDURE INSTRUCTIONS PRIOR TO BCG TREATMENT

Before Each Treatment it is important to know:

- Be on time for your appointments. Your BCG is mixed for you just before your appointment and can only be kept for a short time.
- Limit fluids prior to instillation.
- Just before your treatment time, urinate to empty your bladder.
- Tell your doctor how you have felt between treatments, especially if you have had a fever, been unusually tired, had chills, or if your urine has contained bright red blood or there have been any blood clots in your urine.
- Purchase Clorox bleach prior to procedure day
